

KEEP THE FROST AWAY FROM YOUR FREEZER

The innovative FrostAway system reduces ice formation by up to 55%*, keeping your freezer drier for an easy defrosting.

disclaimer

*Based on results of SLG institute, comparing Hotpoint CO214W chest freezer 214 litres net capacity with FrostAway vs same non-FrostAway model. Ice reduction may vary on other product configurations.

Dear Customer, this product is featured with the "FrostAway" system. This device, by reducing the frost formation inside the cavity, allows less frequent defrosting.

This device allows the door to be easily re-opened even when it's just been closed.

For the proper functioning of the system the hole in the middle of the device should not be covered with food (A).

It is recommended to always close the door using the lock provided; in this way, especially in the first period of life, the good operation of the freezer is assured (B).

During normal operation of the appliance is normal to observe ice formation inside the hole of the device.

When the hole is full with ice, please remove the cover, as shown in the image (C, from Fig. 1 to Fig. 2), and simply wash it under a jet of water (C, Fig. 3). Once dried (C, Fig. 4), you can reassemble the cover following the procedure shown (C, from fig. 5 to Fig. 6).
