## Unpacking and levelling

### Unpacking

![Image of unpacking instructions]

- This is a separate part of the polystyrene base and should be removed with the base.

### IMPORTANT check when unpacking your machine.

1. Unpack the washing machine.
2. Check whether the washing machine has been damaged during transport. If this is the case, do not install it and contact your retailer.
3. Remove the 4 protective screws and the rubber bush with the respective spacer, situated on the rear of the appliance (see also the installation leaflet).
4. Seal the gaps using the plastic plugs provided.
5. Keep all the parts: you will need them again if the washing machine needs to be moved to another location.

*Packaging materials are not children’s toys.*

### Levelling

Your machine may make a considerable amount of noise if the two front feet have not been adjusted correctly.

1. Install the washing machine on a flat sturdy floor, without resting it up against walls, furniture cabinets or other.

2. If the floor is not perfectly level, compensate for any unevenness by tightening or loosening the adjustable front feet (see figure); the angle of inclination, measured according to the worktop, must not exceed 2°.

Levelling your appliance correctly will provide it with stability and avoid any vibrations, noise and shifting during operation. If it is placed on a fitted or loose carpet, adjust the feet in such a way as to allow enough room for ventilation beneath the washing machine.

## Electric and water connections

### Connecting the water inlet hose

![Image of water inlet hose connection]

1. Connect the supply pipe by screwing it to a cold water tap using a 3/4 gas threaded connection (see figure).

Before performing the connection, allow the water to run freely until it is perfectly clear.

2. Connect the other end of the water inlet hose to the washing machine, screwing it onto the appliance’s cold water inlet, situated on the top right-hand side on the rear of the appliance (see figure).

3. Make sure there are no kinks or bends in the hose.

*The water pressure at the tap must be within the values indicated in the Technical details table (on the page 5).*

*If the water inlet hose is not long enough, contact a specialist store or an authorised serviceman.*

*Ensure that the supply taps are allowing water through. Old taps may seize in the closed position and thus prevent water reaching the machine.*
Connecting the drain hose

Connect the drain hose, without bending it, to a draining duct or a wall drain situated between 65 and 100 cm from the floor;

The drain hose may be connected to an under-sink trap. Before connecting the drain hose from the machine ensure that any blanks or removable ends have been taken off the spigot.

If it is placed over the edge of a basin or sink be sure the free end of the hose should not be underwater.

We advise against the use of hose extensions; in case of absolute need, the extension must have the same diameter as the original hose and must not exceed 150 cm in length.

Ensure that if the drain hose is pushed into a standpipe, that the end does not go down more than 15 cms (6 inches). If the hose is pushed down too far, this may cause the machine to self-syphon ie. continuously empty as it is filling.

Electric connection

Before plugging the appliance into the mains socket, make sure that:

• the socket is earthed and in compliance with the applicable law;
• the socket is able to sustain the appliance's maximum power load indicated in the Technical details table (see page 5);
• the supply voltage is included within the values indicated on the Technical Data Plate fixed on the machine.
• the socket is compatible with the washing machine’s plug. If this is not the case, replace the socket or the plug.

Your appliance is now supplied with a 13 amp fused plug it can be plugged into a 13 amp socket for immediate use. Before using the appliance please read the instructions below.

WARNING - THIS APPLIANCE MUST BE EARTHED.

THE FOLLOWING OPERATIONS SHOULD BE CARRIED OUT BY A QUALIFIED ELECTRICIAN.
Replacing the fuse:
When replacing a faulty fuse, a 13 amp ASTA approved fuse to BS 1362 should always be used, and the fuse cover re-fitted. If the fuse cover is lost, the plug must not be used until a replacement is obtained.

Replacement fuse covers:
If a replacement fuse cover is fitted, it must be of the correct colour as indicated by the coloured marking or the colour that is embossed in words on the base of the plug. Replacements can be obtained directly from your nearest Service Depot.

Removing the plug:
If your appliance has a non-rewireable moulded plug and you should wish to re-route the mains cable through partitions, units etc., please ensure that either:
the plug is replaced by a fused 13 ampere rewireable plug bearing the BSI mark of approval.
or:
the mains cable is wired directly into a 13 amp cable outlet, controlled by a switch, (in compliance with BS 5733) which is accessible without moving the appliance.

Disposing of the plug:
Ensure that before disposing of the plug itself, you make the pins unusable so that it cannot be accidentally inserted into a socket.

Instructions for connecting cable to an alternative plug:
Important: the wires in the mains lead are coloured in accordance with the following code:

Green & Yellow  Earth
Blue  Neutral
Brown  Live
As the colours of the wires in the lead may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:
Connect Green & Yellow wire to terminal marked E or E or coloured Green or Green & Yellow.
Connect Brown wire to terminal marked L or coloured Red.
Connect Blue wire to terminal marked N or coloured Black.
If a 13 amp plug (BS 1363) is used it must be fitted with a 13 amp fuse, either in the plug or adaptor or at the distribution board.
If you are in any doubt regarding the electrical supply to your machine, consult a qualified electrician before use.
How to connect an alternative plug:
The wires in this mains lead are coloured in accordance with the following code:

<table>
<thead>
<tr>
<th>Wire Colour</th>
<th>Identification</th>
</tr>
</thead>
<tbody>
<tr>
<td>GREEN &amp; YELLOW</td>
<td>E or E or Green or Green &amp; Yellow</td>
</tr>
<tr>
<td>BROWN</td>
<td>L or Red</td>
</tr>
<tr>
<td>BLUE</td>
<td>N or Black</td>
</tr>
</tbody>
</table>

Disposing of the appliance:
When disposing of the appliance please remove the plug by cutting the mains cable as close as possible to the plug body and dispose of it as described above.

! The washing machine should not be installed in an outdoor environment, not even where the area is sheltered, because it may be very dangerous to leave it exposed to damp, rain and thunderstorms.

! When the Washer-dryer is installed, the mains socket must be within easy reach.

! Do not use extensions or multiple sockets.

! The power supply cable must never be bent or dangerously compressed.

The first wash cycle

Once the appliance has been installed, and before you use it for the first time, run a wash cycle with detergent and no laundry, using the wash cycle 🌀.
## Technical data

<table>
<thead>
<tr>
<th>Model</th>
<th>WDD 750</th>
</tr>
</thead>
</table>
| **Dimensions** | width 59.5 cm  
height 85 cm  
deep 53.5 cm |
| **Capacity** | from 1 to 7 kg for the wash programme  
from 1 to 5 kg for the drying programme |
| **Electrical connections** | please refer to the technical data plate fixed to the machine |
| **Water connections** | maximum pressure 1 MPa  
(10 bar)  
minimum pressure 0.05 MPa (0.5 bar)  
drum capacity 58 litres |
| **Spin speed** | up to 1400 rotations per minute |

### Energy rated programmes according to regulations EN 50229

- **Wash**: programme (90°C);  
temperature 60°C (Press TEMPERATURE button);  
using a load of 7 kg.
- **Drying**: select the "Cottons" drying programme and set the drying level to "Cupboard dry" for both loads. The first drying cycle must be carried out with the nominal load.

This appliance conforms to the following EC Directives:  
- EMC 2014/30/EU (Electromagnetic Compatibility)  
- LVD 2014/35/EU (Low Voltage)  
- 2012/19/EU - (WEEE)
Care and maintenance

Cutting off the water and electricity supplies

• Turn off the water tap after every wash cycle. This will limit wear on the hydraulic system inside the washer dryer and help to prevent leaks.
• Unplug the washer dryer when cleaning it and during all maintenance work.

Cleaning the washer dryer

The outer parts and rubber components of the appliance can be cleaned using a soft cloth soaked in lukewarm soapy water. Do not use solvents or abrasives.

Cleaning the detergent dispenser drawer

Remove the dispenser by raising it and pulling it out (see figure). Wash it under running water; this operation should be repeated frequently.

Caring for the door and drum of your appliance

• Always leave the porthole door ajar in order to prevent unpleasant odours from forming.

Cleaning the pump

The washing machine is fitted with a self-cleaning pump which does not require any maintenance. Sometimes, small items (such as coins or buttons) may fall into the pre-chamber which protects the pump, situated in its bottom part.

Make sure the wash cycle has finished and unplug the appliance.

To access the pre-chamber:

1. using a screwdriver, remove the cover panel on the lower front part of the washing machine (see figure);

2. unscrew the lid by rotating it anti-clockwise (see figure): a little water may trickle out. This is perfectly normal;

3. clean the inside thoroughly;

4. screw the lid back on;

5. reposition the panel, making sure the hooks are securely in place before you push it onto the appliance.

Checking the water inlet hose

Check the inlet hose at least once a year. If there are any cracks, it should be replaced immediately: during the wash cycles, water pressure is very strong and a cracked hose could easily split open.

Never use second-hand hoses.
This washer-dryer was designed and constructed in accordance with international safety regulations. The following information is provided for safety reasons and must therefore be read carefully.

**General safety**
- This appliance was designed for domestic use only.
- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.
- Do not dry unwashed items in the tumble dryer.
- Items that have been soiled with substances such as cooking oil, acetone, alcohol, petrol, kerosene, spot removers, turpentine, waxes and wax removers should be washed in hot water with an extra amount of detergent before being dried in the tumble dryer.
- Items such as foam rubber (latex foam), shower caps, waterproof textiles, rubber backed articles and clothes or pillows fitted with foam rubber pads should not be dried in the tumble dryer.
- Fabric softeners, or similar products, should be used as specified by the fabric softener instructions.
- The final part of a tumble dryer cycle occurs without heat (cool down cycle) to ensure that the items are left at a temperature that ensures that the items will not be damaged.

**WARNING:** Never stop a tumble dryer before the end of the drying cycle unless all items are quickly removed and spread out so that the heat is dissipated.
- Do not touch the machine when barefoot or with wet or damp hands or feet.
- Do not pull on the power supply cable when unplugging the appliance from the electricity socket. Hold the plug and pull.
- Do not open the detergent dispenser drawer while the machine is in operation.
- Do not touch the drained water as it may reach extremely high temperatures.
- Never force the porthole door. This could damage the safety lock mechanism designed to prevent accidental opening.
- If the appliance breaks down, do not under any circumstances access the internal mechanisms in an attempt to repair it yourself.

- Always keep children well away from the appliance while it is operating.
- The door can become quite hot during the wash cycle.
- If the appliance has to be moved, work in a group of two or three people and handle it with the utmost care. Never try to do this alone, because the appliance is very heavy.
- Before loading laundry into the washer-dryer, make sure the drum is empty.
- During the drying phase, the door tends to get quite hot.
- Do not use the appliance to dry clothes that have been washed with flammable solvents (e.g. trichlorethylene).
- Do not use the appliance to dry foam rubber or similar elastomers.
- Make sure that the water tap is turned on during the drying cycles.
- Children of less than 3 years should be kept away from the appliance unless continuously supervised.
- Remove all objects from pockets such as lighters and matches.

**Disposal**
- Disposing of the packaging materials: observe local regulations so that the packaging may be re-used.
- The European Directive 2012/19/EU - WEEE on Waste Electrical and Electronic Equipment, requires that old household electrical appliances must not be disposed of in the normal unsorted municipal waste stream. Old appliances must be collected separately in order to optimise the recovery and recycling of the materials they contain and reduce the impact on human health and the environment. The crossed out “wheeled bin” symbol on the product reminds you of your obligation, that when you dispose of the appliance it must be separately collected.
- Consumers should contact their local authority or retailer for information concerning the correct disposal of their old appliance.
**Description of the washer dryer**

**Control panel**

**Detergent dispenser drawer**: used to dispense detergents and washing additives (see “Detergents and laundry”).

**ON/OFF** button: press this briefly to switch the machine on or off. The START/PAUSE indicator light, which flashes slowly in a green colour shows that the machine is switched on. To switch off the washer dryer during the wash cycle, press and hold the button for approximately 2 seconds; if the button is pressed briefly or accidentally the machine will not switch off. If the machine is switched off during a wash cycle, this wash cycle will be cancelled.

**WASH CYCLE SELECTOR** buttons: used to set the desired wash cycle (see “Table of wash cycles”).

**MEMORY** button: press and hold the button to store a cycle with your own set of preferences in the memory of the machine. To recall a previously stored cycle, press the MEMO button.

**FUNCTION** buttons: press the button to select the desired function. The corresponding indicator light on the display will switch on.

**SPIN** button: press to reduce or completely exclude the spin cycle – the value is indicated on the display.

**TEMPERATURE** button: press to decrease the temperature: the value will be shown on the display.

**CHILD LOCK** button: to activate the control panel lock, press and hold the button for approximately 2 seconds. When the symbol is illuminated, the control panel is locked. This means it is possible to prevent wash cycles from being modified accidentally, especially where there are children in the home. To deactivate the control panel lock, press and hold the button for approximately 2 seconds.

**DELAY START** button: press to set a delayed start time for the selected wash cycle. The delay time will be shown on the display.

**DRYING** button: press to set a drying cycle.

**START/PAUSE** button with indicator light: when the green indicator light flashes slowly, press the button to start a wash cycle. Once the cycle has begun the indicator light will remain lit in a fixed manner. To pause the wash cycle, press the button again; the indicator light will flash in an orange colour. If the symbol is not illuminated, the door may be opened (wait approximately 3 minutes). To start the wash cycle from the point at which it was interrupted, press the button again.

**Standby mode**

This washing machine, in compliance with new energy saving regulations, is fitted with an automatic standby system which is enabled after about 30 minutes if no activity is detected. Press the ON-OFF button briefly and wait for the machine to start up again.

Consumption in off-mode: 0,5 W
Consumption in Left-on: 8 W
The display is useful when programming the machine and provides a great deal of information.

The upper two strings A and B are used to display the selected wash cycle or the type of drying selected, the current wash cycle phase (the selected dryness level or drying time) and all the indications relating to the progress status of the cycle.

String C shows the time remaining until the end of the wash cycle in progress and, if a DELAYED START has been set, the time remaining until the start of the selected wash cycle.

String D shows the maximum spin speed value (this depends on the selected wash cycle); if the wash cycle does not include a spin cycle, the string remains unused.

String E shows the maximum temperature value which may be selected (this depends on the wash cycle used); if the temperature of the wash cycle cannot be modified, the string remains unused.

Indicator lights F correspond to the functions and light up when the selected function is compatible with the set wash cycle.

Door locked symbol 🚫
If the symbol is lit, this indicates that the washer dryer door is blocked to prevent it from being opened accidentally. To prevent any damage from occurring, wait for the symbol to switch itself off before opening the appliance door.

N.B.: if the DELAY START function has been activated, the door cannot be opened (wait approximately 3 minutes); pauses the machine by pressing the START/PAUSE button if you wish to open it.
How to run a wash cycle or a drying cycle

1. SWITCH THE MACHINE ON. Press the button; the text HELLO will appear on the display and the START/PAUSE indicator light will flash slowly in a green colour.

2. LOAD THE LAUNDRY. Open the porthole door. Load the laundry, making sure you do not exceed the maximum load value indicated in the table of programmes on the following page.

3. MEASURE OUT THE DETERGENT. Pull out the detergent dispenser drawer and pour the detergent into the relevant compartments as described in “Detergents and laundry”.

4. CLOSE THE DOOR.

5. SELECT THE WASH CYCLE. Press one of the WASH CYCLE SELECTOR buttons to select the required wash cycle; the name of the wash cycle will appear on the display. A temperature and spin speed is set for each wash cycle; these may be adjusted. The duration of the cycle will appear on the display.

6. CUSTOMISE THE WASH CYCLE. Use the relevant buttons:

   ![Modifying the temperature and/or spin speed.](image) The machine automatically selects the maximum temperature and spin speed set for the selected wash cycle; these values cannot, therefore be increased. The temperature can be decreased by pressing the button, until the cold wash “OFF” setting is reached. The spin speed may be progressively reduced by pressing the button, until it is completely excluded (the “OFF” setting). If these buttons are pressed again, the maximum values are restored.

   ![Setting a delayed start.](image) To set a delayed start for the selected programme, press the corresponding button repeatedly until the required delay period has been reached. When this option is enabled, the symbol lights up on the display. To remove the delayed start function press the button until the text “OFF” appears on the display.

   ![Setting the drying cycle.](image) The desired drying cycle type may be set by pressing the DRYING button once or several times. Two options are available:

   - **A** - Based on the how damp the clothes are once they have been dried:
     - Iron dry: slightly damp clothes, easy to iron.
     - Cupboard dry: very dry clothes, recommended for towelling and bathrobes.
   - **B** - Based on time: from 30 minutes to 180.

   To exclude the drying phase press the relevant button until the text “OFF” appears on the display.

   If your laundry load to be washed and dried is much greater than the maximum stated load (see Table of wash cycles), perform the wash cycle, and when the cycle is complete, divide the garments into groups and put some of them back in the drum. At this point, follow the instructions provided for a “Drying only” cycle. Repeat this procedure for the remainder of the load.

   **N.B:** a cooling-down period is always added to the end of each drying cycle.

Drying only
Select a drying setting using the WASH CYCLE selector in accordance with the type of fabric, then select the desired drying type using the DRYING button.

Modifying the cycle settings.
- Press the button to enable the function; the indicator light corresponding to the button will switch on.
- Press the button again to disable the function; the indicator light will switch off.

If the selected function is not compatible with the programmed wash cycle, the indicator light will flash and the function will not be activated.

If the selected function is not compatible with another function which has been selected previously, the indicator light corresponding to the first function selected will flash and only the second function will be activated; the indicator light corresponding to the enabled function will remain lit.

The functions may affect the recommended load value and/or the duration of the cycle.

7. START THE PROGRAMME. Press the START/PAUSE button. The corresponding indicator light will become green, remaining lit in a fixed manner, and the door will be locked (the DOOR LOCKED symbol will be on). During the wash cycle, the name of the phase in progress will appear on the display. To change a wash cycle while it is in progress, pause the washer dryer using the START/PAUSE button (the START/PAUSE indicator light will flash slowly in an orange colour); then select the desired cycle and press the START/PAUSE button again.

   To open the door while a cycle is in progress, press the START/PAUSE button, if the DOOR LOCKED symbol is switched off the door may be opened. Press the START/PAUSE button again to restart the wash cycle from the point at which it was interrupted.

8. THE END OF THE WASH CYCLE. This will be indicated by the text “END OF CYCLE” on the display, when the DOOR LOCKED symbol switches off the door may be opened. Open the door, unload the laundry and switch off the machine.

If you wish to cancel a cycle which has already begun, press and hold the button. The cycle will be stopped and the machine will switch off.

</table>

The length of cycle shown on the display or in this booklet is an estimation only and is calculated assuming standard working conditions. The actual duration can vary according to factors such as water temperature and pressure, the amount of detergent used, the amount and type of load inserted, load balancing and any wash options selected.

For all Test Institutes:
(1) Test wash cycle in compliance with regulation EN 50229: set wash cycle 90°C; temperature of 60°C (Press TEMPERATURE button).
(2) Long wash cycle for cottons: set wash cycle 90°C; temperature of 40°C (Press TEMPERATURE button).
(2) Ready to Wear
This cycle was designed to wash and dry lightly soiled small loads quickly. By selecting this cycle it is possible to wash and dry a maximum load of 1 kg in just 50 minutes.

Wash functions

- **Super Wash**
  Because a greater quantity of water is used in the initial phase of the cycle, and because of the increased cycle duration, this function offers a high-performance wash.

- **Reduced Creases**
  By selecting this function, the wash and spin cycles will be modified in order to reduce the formation of creases. At the end of the cycle the washing machine will perform slow rotations of the drum, the “Reduced creases” and START/PAUSE indicator lights will flash [orange] and the text “END OF CYCLE” will appear on the display. To end the cycle, press the START/PAUSE button or the “Reduced creases” button. For the Silk/Curtains cycle, the machine will end the cycle while the laundry is soaking; the “Reduced creases” and START/PAUSE indicator lights will flash [orange] and the text “RINSE HOLD” will appear on the display. To drain the water so that the laundry may be removed, press the START/PAUSE button or the “Reduced creases” button.

- **Mini Load**
  This function is recommended for when the load of laundry is equal to half, or less than half, of the maximum recommended load (see Table of wash cycles).

- **Time Saver**
  Reduces the duration of the wash cycle.
Detergents and laundry

Detergent dispenser drawer
Good washing results also depend on the correct dose of detergent: adding too much detergent will not necessarily result in a more efficient wash, and may in fact cause build up on the inside of your appliance and contribute to environmental pollution.

! Do not use hand washing detergents because these create too much foam.

Open the detergent dispenser drawer and pour in the detergent or washing additive, as follows.

! Do not pour detergent into the middle compartment (*). Detergent should only be poured into the compartment 1.

compartment 1: Detergent for the wash cycle (powder or liquid)
For best results liquid detergent should be poured in the dispenser immediately before the start of the programme.

compartment 2: Additives (fabric softeners, etc.)
The fabric softener should not overflow the grid.

Garments requiring special care
Curtains: fold curtains and place them in a pillow case or mesh bag. Use wash cycle 🥰.
Wool: all wool garments can be washed using programme 🐐, even those carrying the “hand-wash only” 🖤 label. For best results, use special detergents and do not exceed 2 kg of laundry.

Load balancing system
Before every spin cycle, to avoid excessive vibrations and to distribute the load in a uniform manner, the drum rotates continuously at a speed which is slightly greater than the washing rotation speed. If, after several attempts, the load is not balanced correctly, the machine spins at a reduced spin speed. If the load is excessively unbalanced, the washer dryer performs the distribution process instead of spinning. To encourage improved load distribution and balance, we recommend small and large garments are mixed in the load.

Preparing the laundry
- Divide the laundry according to:
  - the type of fabric/the symbol on the label
  - the colours: separate coloured garments from whites.
- Empty all garment pockets and check the buttons.
- Do not exceed the listed values, which refer to the weight of the laundry when dry: see “Table of wash cycles”.

How much does your laundry weigh?
- 1 sheet 400-500 g
- 1 pillow case 150-200 g
- 1 tablecloth 400-500 g
- 1 bathrobe 900-1200 g
- 1 towel 150-250 g
Troubleshooting

Your washer dryer could fail to work. Before contacting the Technical Assistance Centre (see “Assistance”), make sure that the problem cannot be solved easily using the following list.

Problem: The machine does not switch on.
- Possible causes / Solutions:
  - The appliance is not plugged into the socket fully, or not enough to make contact.
  - There is no power to the socket, or the fuse has blown in the mains plug.

Problem: The wash cycle does not start.
- The door is not closed properly.
- The ON/OFF button has not been pressed.
- The START/PAUSE button has not been pressed.
- The water tap has not been turned on to allow water to flow into the machine.
- The ‘DELAY TIMER’ has been selected.
- The ‘CHILD LOCK’ is activated (see ‘The machine just ‘beeps’ when a programme or option is selected’ below).

Problem: The machine does not dry.
- Check the 2 sections above.
- The ‘DRY’ button has been pressed to exclude drying.

Problem: The clothes are too hot when the drying cycle is finished.
- A cooling-down period is always added to the end of each drying cycle. If the clothes appear too hot to handle leave the door open to allow to cool further before removing from the machine.

Problem: The machine does not fill with water or ‘No Water, Check Supply’ is shown in the display window.
- The water inlet hose is kinked.
- The water inlet hose is not connected to the water supply.
- The water pressure is too low.
- The water tap has not been turned on to allow water to flow into the machine.
- There is no water supply to the house.
- The inlet valve filter is blocked.
- The ‘DRY’ button has been pressed to exclude drying.

Problem: The machine continuously fills with water and continually drains away or Water left in the drum or Stuck on wash.
- The top of the drain hose is too low - It must be fitted at a height between 65 and 100 cm from the floor (see “Installation”).
- The drain hose is connected incorrectly to the sink trap allowing water to run into the machine, the drain hose must be positioned higher than the bottom of the sink to prevent water flowing down the drain hose.
- The end of the drain hose has been pushed too far down the standpipe, the ‘U’ bracket should be fitted 100 mm from the end of the drain hose.
- The Pump filter is blocked - (see Care & Maintenance).
- The drain hose is kinked.
- New Installation - The blanking cap or spigot has not been removed if connected under a sink.
- The drain hose or sink trap is blocked.

Problem: The machine does not drain or spin - ‘START/PAUSE’ flashing orange.
- The ‘REDUCED CREASES’ option is enabled, at the end of the program the machine drum will rotate slowly and ‘END OF CYCLE’ will appear in the display. To complete the program press either the ‘REDUCED CREASES’ or the ‘EASY IRON’ buttons (see Wash Cycles & Functions).

Problem: The machine does spin.
- ‘SILK/CURTAINS’ program is selected, at the end of the program it will not drain and ‘RINSE HOLD’ will appear in the display. To complete the program press either the ‘START/PAUSE’ or ‘REDUCED CREASES’ buttons (see Wash Cycles & Functions).

Problem: The machine does not drain or spin - ‘REDUCED CREASES’ & ‘START/PAUSE’ flashing orange and message in display.
- Programme times will vary due to water pressure, the incoming water temperature and if the wash load goes out of balance. This will increase the programme time accordingly (see ‘The machine won’t spin properly’ next page) - (Most Common Cause!)

Problem: Programme times will vary due to water pressure, the incoming water temperature and if the wash load goes out of balance. This will increase the programme time accordingly (see ‘The machine won’t spin properly’ next page) - (Most Common Cause!)

Problem: The wash programme takes too long.
- The display time is for guidance only - it is not a precise time to finish and may vary.
The machine vibrates a lot during the spin cycle.
- The feet have not been adjusted, enabling the machine to rock.
- New Installation - Either the Transit Bolts including the plastic spacers, or the Polystyrene Packaging have not been removed when installing the machine.
- The machine is trapped between cabinets and/or walls.
- The load is in a slight out of balance condition and machine is spinning, but at a lower speed.

The machine is noisy.
- There will always be some motor, pump and drum noise during spin.

The machine won't spin properly.
- Out of Balance detected when attempting to go into a spin cycle - If this happens the machine will continue to try to repeat the distribution of the load required before the machine will go into higher spin speeds - This will increase the programme time accordingly. This is a safety feature to prevent damage. Out of Balance can be caused by washing a single heavy item (eg duvet, quilt, etc). - Try the programme again using a different load.

The machine leaks from the dispenser.
- The dispenser drawer is blocked with detergent and requires cleaning.
- The water pressure is too high and requires turning down - turn down the tap on the water supply pipe slightly and try again.
- The machine is tilting forwards - It must be level when in its final position.

The machine leaks (other than dispenser).
- The fill hose is loose, check both the cabinet and tap ends.
- The fill hose is tight but still leaks, if so replace the rubber washers, or the fill hose is missing the rubber washer.
- The drain hose is not fixed in properly.

The machine is locked and an error code appears on the display (eg F-01, F-...).
- Switch off the machine and unplug it, wait for approximately 1 minute and then switch it back on again If the problem persists contact the Technical Assistance Service.

The machine smells.
- The machine requires a service wash. Run a 90 degree wash cycle with detergent and no laundry.

The machine door cannot be opened.
- The door will not open until the door lock indicator light goes out shortly after the program has finished.
- If there is no power to the machine you need to perform the manual unlocking procedure (see Precautions & Tips).

Door Seal damaged at the bottom.
- The door seal has drainage holes at the bottom - This is normal.

The water level is too low when the machine is washing.
- The water level is correct if it can be seen at the bottom of the door.

The word ‘DEMO ON’ appears intermittently in the display window and the drum slowly turns.
- To exit, switch machine off, then press and hold ‘ON/OFF’ and ‘START/PAUSE’ buttons simultaneously for 3 seconds. Note the machine will need the language resetting.

The machine just ‘beeps’ when a programme or option is selected (Child Lock Symbol is lit).
- Deactivate the Child Lock feature by pressing and holding in the ‘CHILD LOCK’ button for 2 seconds.

There is too much foam.
- The detergent is not suitable for machine washing (it should display the text ‘for washing machines’ or ‘hand and machine wash’ or the like).
- Too much detergent was used - less detergent is required in soft water.

After completing the programme, or before starting a programme, the machine has turned itself off (no lights).
- To comply with new energy saving regulations the machine is fitted with an automatic standby system. Press ‘ON/OFF’ button for 3 seconds to activate the machine, it can then either be switched off or a new programme selected.
- Your washing machine contains sensors that monitor progress during the wash cycle (eg: Water Levels, Temperatures, Out of Balance loads, Wash time/progress). Normally, if your machine successfully completes the cycle, there is unlikely to be anything wrong!

Remember, you will be charged for a service call for problems caused by incorrect installation, as indicated on pages 2 to 4.
Not emptying contents from pockets may cause pump or drain blockages, or may damage the machine.
Do not wash items which do not have a wash label, or wash items that are not intended as machine washable.
Guarantee

12 Months Parts and Labour Guarantee

Your appliance has the benefit of our manufacturer's guarantee, which covers the cost of breakdown repairs for twelve months from the date of purchase. This gives you the reassurance that if, within that time, your appliance is proven to be defective because of either workmanship or materials, we will, at our discretion, either repair or replace the appliance at no cost to you:

This guarantee is subject to the following conditions:
- The appliance has been installed and operated correctly and in accordance with our operating and maintenance instructions.
- The appliance is used only on the electricity or gas supply printed on the rating plate.
- The appliance has been used for normal domestic purposes only.
- The appliance has not been altered, serviced, maintained, dismantled, or otherwise interfered with by any person not authorised by us.
- Any repair work must be undertaken by us or our appointed agent.
- Any parts removed during repair work or any appliance that is replaced become our property.
- The appliance is used in the United Kingdom or Republic of Ireland.

The guarantee does not cover:
- Damage resulting from transportation, improper use, neglect or interference or as a result of improper installation.
- Replacement of any consumable item or accessory. These include but are not limited to: plugs, cables, batteries, light bulbs, fluorescent tubes and starters, covers and filters.
- Replacement of any removable parts made of glass or plastic.

THIS GUARANTEE WILL NOT APPLY IF THE APPLIANCE HAS BEEN USED IN COMMERCIAL OR NON-DOMESTIC PREMISES.

Recycling and Disposal Information

As part of Hotpoint’s continued commitment to helping the environment, Hotpoint reserves the right to use quality, recycled components to keep down customer costs and minimise material wastage. Please dispose of packaging and old appliances carefully. To minimise the risk of injury to children, remove the door, plug, and cut the mains cable off flush with the appliance. Dispose of these parts separately to ensure that the appliance can no longer be plugged into mains socket, and the door cannot be locked shut.
