Before using the appliance carefully read the Health and Safety guide. Before using the machine, it is imperative that the transport bolts are removed. For more detailed instructions on how to remove them, see the Installation Guide.

</tbody>
</table>

The cycle duration indicated on the display or instruction manual is an estimate based on standard conditions. The actual duration may vary in relation to several factors, such as the temperature and pressure of the incoming water, ambient temperature, amount of detergent, load quantity and type, load balancing and any additional options selected.

1) Test wash cycle in compliance with regulation 1061/2010:
This cycle is designed for normally soiled cotton loads and is the most efficient in terms of both electricity and water consumption; it should be used for garments washable at 60°C or at 40°C. The actual washing temperature may differ from the indicated value.

** Required dosage  ○ Optional dosage

For all testing institutes:
2) Long cotton cycle: set wash cycle 3 with a temperature of 40°C.
3) Long synthetics cycle: set wash cycle 4 with a temperature of 40°C.
* By selecting the 14 cycle and excluding the spin cycle, the washing machine will drain only.
** The duration of the wash cycles can be checked on the display.
*** For Prewash press the “Temp.” button until the symbol lights up (only 90%).

### DETERGENT DISPENSER DRAWER

compartment 1: Pre-wash detergent (powder)

compartment 2: Detergent for the wash cycle (powder or liquid)

If liquid detergent is used, it is recommended that the removable plastic partition A (supplied) be used for proper dosage. If powder detergent is used, place the partition into slot B.

compartment 3: Additives (fabric softeners, etc.)

The fabric softener should not overflow the grid.

1 Use powder detergent for white cotton garments, for pre-washing, and for washing at temperatures over 60°C.

Follow the instructions given on the detergent packaging.

### PRODUCT DESCRIPTION

1. Top
2. Detergent dispenser drawer
3. Control panel
4. Handle
5. Porthole door
6. Drain pump (behind the plinth)
7. Plinth (removable)
8. Adjustable feet (2)
WASH CYCLES

Follow the instructions on the symbols of the garment’s wash care label. The value indicated in the symbol is the maximum recommended temperature for washing the garment.

Mixed
For washing lightly to normally soiled resilient garments in cotton, linen, synthetic fibres and mixed fibres.

Eco Cotton 60°/40°
Suitable for washing moderately soiled cotton garments. At 40°C and 60°C it is the standard cycle for washing cotton garments, and is the most efficient in terms of combined water and electricity consumption.

Cotton
Normaly to heavily soiled and robust cottons.

Synthetics
Suitable for washing moderately soiled garments made of synthetic fibres (e.g. polyester, polyacrylic, viscose, etc.) or mixed synthetic-cotton fibres.

Delicates
For washing very delicate garments. It is advisable to turn the garments inside out before washing them. For best results, use liquid detergent on delicate garments.

Wool - Woolmark Apparel Care - Green:
The "Wool" wash cycle is approved by the Woolmark Company for washing wool garments classified as "hand-washable", provided that the wash complies with the instructions appearing on the garment’s label and with those provided by the manufacturer of this washing machine.

In UK, Eire, Hong Kong and India the Woolmark trade mark is a Certification trade mark.

Anti Allergy
Suitable for removing major allergens such as pollen, mites and cat or dog hair.

Anti Stain 40°
The programme is suitable to heavily-soiled garments with resistant colours. It ensures a washing class that is higher than the standard class (A class). When running the programme, do not mix garments of different colours. We recommend the use of powder detergent. Pre-treatment with special additives is recommended if there are obstinate stains.

White
For washing normally to heavily soiled towels, underwear, table and bed linen, etc in resilient cotton and linen. Only when the temperature is selected at 90°C the cycle is provided with a prewash phase before main washing phase. In this case it is recommended to add detergent both, in the prewash and main wash section.

Steam Refresh
The garments will be damp once the cycle is completed, so we recommend hanging them to dry (2 kg, roughly 3 items). This programme refreshes garments by removing bad odours and relaxing the fibres. Insert dry items only (that are not dirty) and select programme "Steam Refresh". Garments will be a little damp at the end of the cycle and can be worn after a few minutes. The "Steam Refresh" programme makes ironing easier.

Rapid 30 min
For washing lightly soiled garments quickly. This cycle lasts only 30 minutes, saving time and energy.

Bed & Bath
For washing home linen in a single cycle. It optimises the use of fabric softener and allows for saving time and electricity. We recommend the use of powder detergent.

Socks
Use the special wash cycle to wash shirts in different fabrics and colours to guarantee they receive the best possible care.

Spins & Drain
Spins the load then empties the water. For resilient garments. If you exclude the spin cycle, the machine will drain only.

Rinse & Spin
Rinse and then spins. For resilient garments.

The duration of the available wash cycles and the remaining time of a running cycle appear in section A (the display will show the maximum duration of the cycle chosen, which may decrease after several minutes, since the effective duration of the programme varies depending on the wash load and the settings chosen); if the DELAYED START option has been set, the countdown to the start of the selected wash cycle will appear. Pressing the corresponding button allows you to view the maximum spin speed and temperature values attained by the machine during the set wash cycle, or the values selected most recently, if these are compatible with the set wash cycle.

The "wash cycle phases" corresponding to the selected wash cycle and the "wash cycle phase" of the running wash cycle appear in section B:

- Main wash
- Rinse
- Spin + Pump out

References C indicate the wash options available (See "Options" section).

The "Start Delay" symbol \(\circ\), when lit, indicates that the set "delayed start" value has appeared on the display. The symbol \(\circ\) indicates the possibility of inserting an additional garments load with the washing program started (See "Adding Garments" section).

For activate/deactivate the mute press and hold \(\circ\) button.

DISPLAY INDICATORS

Failure: Call Service 
Refer to Troubleshooting section
Failure: Water filter clogged
Water cannot be drained; water filter might be blocked
Failure: No water
No or not sufficient inlet water.

In the event of any failure, refer to the "Troubleshooting" section.

Key Lock
To lock the control panel, press and hold the "key lock" \(\circ\) button for approximately 3 seconds. The symbol \(\circ\) will light up on the display to indicate that the control panel has been locked (with the exception of the "ON/OFF" button). This prevents unintentional changes to programmes, especially with children near the machine. To unlock the control panel, press and hold the "key lock" \(\circ\) button for approximately 3 seconds.

Locked door indicator
When lit, the symbol indicates that the door is locked. To prevent any damage, wait until the symbol turns off before opening the door.

To open the door while a cycle is in progress, press the START/PAUSE button \(\circ\) if the \(\circ\) symbol is off, the door can be opened.

FIRST-TIME USE

Once the appliance has been installed, and before you use it for the first time, run a wash cycle with detergent and no laundry, using the wash cycle 9 (60°).

DAILY USE

Prepare the laundry by following the suggestions appearing under the "TIPS AND SUGGESTIONS" section.

- Press the ON/OFF button \(\circ\).
- Open the door. Load the laundry while making sure not to exceed the maximum load quantity indicated in the wash cycle table.
- Pull out the detergent dispenser drawer and pour the detergent into the relevant compartments, as described in the "DETERGENT DISPENSER DRAWER" section.
- Close the door.
- The machine automatically displays the default temperature and spin speed values for the selected cycle, or the most recently used settings if they are compatible with the selected cycle.
- Select the desired wash cycle.
- Select the desired options.
- Press the START/PAUSE \(\circ\) button to start the wash cycle; the door will lock \(\circ\) symbol on).
PAUSING A CYCLE
To pause the wash cycle, press the START/PAUSE button again. To start the wash cycle from the point at which it was interrupted, press the START/PAUSE button again.

OPENING THE DOOR, IF NECESSARY
Once a cycle starts, the symbol turns on to signal that the door cannot be opened. While a wash cycle is running, the door remains locked. To open the door while a cycle is under way, for example, to add or remove garments, press the START/PAUSE button to pause the cycle. If the symbol is not lit, the door may be opened. Press the START/PAUSE button again to continue the cycle.

ADDING GARMENTS
An icon on the display will signal when additional garments can be introduced into the washing machine, without decreasing the washing performance. To add garments, first stop the washing machine by pressing the START/PAUSE button, then select the desired cycle and press the START/PAUSE button again.

! Make sure that the washing machine is switched off before adding or removing garments.

CHANGING A RUNNING WASH CYCLE
To change a wash cycle while it is in progress, pause the washing machine using the START/PAUSE button, then select the desired cycle and press the START/PAUSE button again.

- If the selected option is not compatible with the set wash cycle, an alarm sounds and the cycle time will be reset.
- If the selected option is not compatible with another previously selected option, an alarm sounds and the option will not be activated.

Steam Hygiene
This option enhances washing performance by generating steam during the wash cycle to remove any bacteria from the fibres, which are treated at the same time. Place the laundry in the drum, choose a compatible programme and select option Steam Hygiene.

- The steam generated during the operation of the washing machine may cause the porthole door to become very hot.

Final Care
The washing machine will perform gentle tumbling through slow rotations of the drum. Final Care option starts after the cycle ends for a maximum duration of 6 hours and you can interrupt at any time by pressing any button on the control panel or turning the knob.

Rapid / Eco
After pushing the button for the 1st time, option Rapid is selected and the cycle duration will be reduced.

- Otherwise after pushing for the 2nd time, option Eco is selected allowing more energy saving.

Active Care
The detergent, premixed with water, creates an emulsion able to penetrate the fibres of the garments, cleaning stains at even low temperatures, preserving both colors and fabrics. This behaviour is achieved by the multiple different specific movements of the drum which best take care of the garments.

Start Delay
To set a delayed start for the selected cycle, press the corresponding button repeatedly until the desired delay period is reached. When this option has been activated, the symbol lights up on the display.

Temperature
Each wash cycle has a pre-defined temperature. To modify the temperature, press the "Temp." button. The value will appear on the display.

Spin
Each wash cycle has a pre-defined spin speed. To modify the spin speed, press the "Spin Speed" button. The value will appear on the display.

DESCALE AND CLEAN PROCEDURE
An icon on the display will regularly (roughly every 50 cycles) remind users that is time to run a maintenance cycle to clean the washing machine and combat limescale build-up and bad odours.

To delete the descale alert turn the knob or push any button (including ON/OFF button).

For optimal maintenance we suggest using WPRO Limescale and grease remover, according to the instructions shown on the package.

TIPS AND SUGGESTIONS
- Divide the laundry according to the type of fabric: cotton, mixed fibres, synthetics, wool, garments to be hand-washed. Colour (separate coloured garments from whites, wash new coloured garments separately). Delicates (small garments – such as nylon stockings – and items with hooks – such as bras: insert them in a fabric bag).
- Empty the pockets: Objects such as coins or lighters can damage the washing machine and the drum.
- Check all buttons.
- Do not lift the washing machine by gripping it from the upper section.
- Do not dry delicate items on a hanger.
- Do not lift the washing machine to save space and facilitate loading and unloading of the tumble dryer.

ACCESSORIES
- Contact our Technical Assistance Service to check whether the following accessories are available for your washing machine model.
- Stacking kit: With this accessory you can secure the tumble dryer to the upper part of your washing machine to save space and facilitate loading and unloading of the tumble dryer.
- Transport and handling: Do not lift the washing machine by gripping it from the upper section. Unplug the appliance and close the water tap. Check that the door and detergent dispenser drawer are tightly closed. Detach the filling hose from the water tap then detach the drain hose. Empty all the water remaining in the hoses and secure the latter so that they do not get damaged during transport. Apply the transport bolts back on. Repeat, in reverse order, the transport bolt removal procedure described in the "Installation instructions".
TROUBLESHOOTING
Your washing machine could occasionally fail to work. Before contacting the Technical Assistance Service, make sure that the problem cannot be easily solved using the following list.

<table>
<thead>
<tr>
<th>Anomalies</th>
<th>Possible causes / Solution</th>
</tr>
</thead>
</table>
| The washing machine does not start. | - The appliance is not plugged into the socket fully, or not enough to make contact.  
- There is no power in the house. |
| The wash cycle does not start.    | - The washing machine door is not closed properly.  
- The ON/OFF button has not been pressed.  
- The START/PAUSE button has not been pressed.  
- The water tap has not been opened.  
- A delay has been set for the start time.  
- The Demo Mode is active (see below how to deactivate). |
| The washing machine does not fill with water ("\(\)" appears on the display). | - The water inlet hose is not connected to the tap.  
- The hose is bent.  
- The water tap has not been opened.  
- There is no water supply in the house.  
- The pressure is too low.  
- The START/PAUSE button has not been pressed. |
| The washing machine continuously loads and unloads water. | - The drain hose is not fitted between 65 and 100 cm from the floor.  
- The free end of the hose is immersed in water.  
- The wall drainage system is not fitted with a breather pipe.  
- If the problem persists even after these checks, turn off the water tap, switch the appliance off and contact the Technical Assistance Service. If the home is on one of the upper floors of a building, there may be problems relating to back-siphonage, causing the washing machine to fill with water and drain continuously. Special anti-siphon valves are available in shops and help to prevent this inconvenience. |
| The washing machines does not drain and the symbol (F9E1) on the display. | - Clean the pump filter (see Care and maintenance chapter)  
- The drain hose is bent.  
- The drainage duct is clogged. |
| The washing machine vibrates a lot during the spin cycle. | - Transport bolts have been not removed correctly during installation.  
- The washing machine is not leveled.  
- The washing machine is tucked between furniture cabinets and the wall. |
| The washing machine leaks.        | - The water inlet hose is not screwed on properly.  
- The detergent dispenser drawer is obstructed.  
- The drain hose is not properly attached. |
| The symbol blinks and the display visualises an error code (e.g.: F1E1, F4...). | - Switch off the machine and unplug it, wait for approximately 1 minute and then switch it back on again.  
- If the problem persists, contact the Technical Assistance Service. |
| There is too much foam.           | - The detergent is not suitable for machine washing (it should display the text “for washing machines” or “hand and machine wash”, or the like).  
- Too much detergent was used. |
| “Spin&Drain” phase icon blinks, “0” spin speed displayed. | - Unbalance of laundry load prevented spin cycle, to protect the washing machine.  
- If you want to spin the wet laundry, add more laundry items of different sizes and start “Spin&Drain” programme.  
- Avoid small laundry loads consisting of few big, absorbent pieces of laundry / wash different sizes of articles in one load. |

Disable the DEMO MODE: The following actions must be carried out in sequence, without breaks. Switch the machine ON and then switch it OFF again. Press the START/PAUSE button until the buzzer is heard. Switch the machine on again. The “DEMO” indicator flashes and then turns OFF.

You can download the SAFETY AND INSTALLATION INSTRUCTIONS, OPERATING MANUAL, TECHNICAL SHEET and ENERGY DATA by:
- Visiting the website http://docs.hotpoint.eu.
- Using the QR code.
- Alternatively, contact our Technical Assistance Service (the telephone number is indicated in the warranty booklet). When contacting the Technical Assistance Service, provide the codes shown on the adhesive label applied to the inside of the door.
