Instructions for use

KitchenAid

These instructions are also available at: docs.kitchenaid.eu

Important safety instructions

YOUR SAFETY AND THAT OF OTHERS IS VERY IMPORTANT
This manual and the appliance itself display important safety warnings, to be read and observed at all times.

⚠ This is the danger symbol relating to safety, which alerts users to potential risks to themselves and others. All safety warnings are preceded by the danger symbol and the text shown here:

⚠ **DANGER**	**Indicates a hazardous situation which, if not avoided, will cause serious injury.**

⚠ **WARNING**	**Indicates a hazardous situation which, if not avoided, could cause serious injury.**

All safety warnings give specific details of the potential risk present, and indicate how to reduce the risk of injury, damage and electric shock resulting from improper use of the appliance. Carefully observe the following instructions:
- Wear protective gloves when unpacking and installing the appliance.
- The appliance must be disconnected from the power supply before installation.
- Installation and maintenance must be carried out by a qualified technician, in compliance with the manufacturer's instructions and local safety regulations. Do not repair or replace any part of the appliance unless specifically stated in the user manual.
- Replacement of power cables must be carried out by a qualified electrician. Contact an authorised After-Sales Service.
- Regulations require that the appliance be earthed.
- Once the appliance is fitted in its housing, the power cable must be long enough to connect the

appliance to the mains power supply.
- For installation to comply with current safety regulations, an omnipolar disconnect switch with a minimum contact gap of 3 mm must be used.
- Do not use multiple plug adaptors if the oven is fitted with a plug.
- Do not use extension leads.
- Do not pull the power supply cable.
- The electrical components must not be accessible to the user after installation.
- Do not use the surface of the induction plate if it is cracked, and switch off the appliance to avoid the possibility of electric shock (only for models with induction function).
- Do not touch the appliance with any wet part of the body and do not operate it when barefoot.
- This appliance is designed solely for use as a domestic appliance, for cooking food. No other use is permitted (e.g. heating rooms). The manufacturer declines any liability for inappropriate use or incorrect setting of the controls.
- The appliance and its accessible parts become hot during use.
- Care should be taken to avoid touching heating elements.
- Very young (0-3 years) and young children (3-8 years) must be kept away unless continuously supervised.
- Children aged 8 years and above, and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge can only use this appliance if they are supervised or have been given instructions on safe appliance

use, and if they understand the hazards involved. Children must not play with the appliance. Cleaning and user maintenance must not be carried out by children without supervision.

- During and after use, do not touch the heating elements or interior surfaces of the appliance – risk of burns. Do not allow the appliance to come into contact with cloths or other flammable materials until all the components have cooled down completely.
- At the end of cooking, exercise caution when opening the appliance door, letting the hot air or steam exit gradually before accessing the oven. When the appliance door is shut, hot air is vented from the aperture above the control panel. Do not obstruct the vent apertures.
- Use oven gloves to remove pans and accessories, taking care not to touch the heating elements.
- Do not place flammable materials in or near the appliance: a fire may break out if the appliance is inadvertently switched on.
- Do not heat or cook sealed jars or containers in the appliance.
- The pressure that builds up inside might cause the jar to explode, damaging the appliance.
- Do not use containers made of synthetic materials.
- Overheated oils and fats catch fire easily. Always remain vigilant when cooking foods rich in fat and oil.
- Never leave the appliance unattended during food drying.
- If alcoholic beverages are used when cooking foods (e.g. rum, cognac, wine), remember that

alcohol evaporates at high temperatures. As a result, there is a risk that vapours released by the alcohol may catch fire upon coming into contact with the electrical heating element.

- Never use steam cleaning equipment.
- Do not touch the oven during the pyrolysis cycle. Keep children away from the oven during the pyrolysis cycle. Any excess spillage must be removed from the oven cavity before the cleaning cycle (only for ovens with the Pyrolysis function).
- During and after the pyrolysis cycle, animals must be kept away from the area where the appliance is located (only for ovens with the Pyrolysis function).
- Use only the temperature probe recommended for this oven.
- Do not use harsh abrasive cleaners or sharp metal scrapers to clean the oven door glass, since these can scratch the surface, which may result in shattering of the glass.
- Ensure that the appliance is switched off before replacing the lamp to avoid the possibility of electric shock.
- Do not use aluminium foil to cover food in the cooking vessel (only for ovens with a cooking vessel supplied).

SCRAPPING OF HOUSEHOLD APPLIANCES
- This appliance is manufactured with recyclable or reusable materials. Scrap the appliance in accordance with local regulations on waste disposal. Before scrapping, cut off the power cords so that the appliances cannot be connected to the mains.
- For further information on the treatment, recovery and recycling of household electrical appliances, contact your competent local authority, the collection service for household waste or the store where you purchased the appliance.

Installation

After unpacking the oven, ensure that it has not been damaged during transit and that the oven door closes properly.

In the event of problems, contact the dealer or your nearest After-Sales Service. To avoid any damage, only remove the oven from its polystyrene foam base at the time of installation.

PREPARING THE HOUSING UNIT
- Kitchen units in contact with the oven must be heat-resistant (min 90 °C).
- Carry out all cabinet cutting work before fitting the oven in the housing unit, and carefully remove all wood chips and sawdust.
- After installation, the bottom of the oven must no longer be accessible.
- For correct appliance operation, do not obstruct the minimum gap between the worktop and the upper edge of the oven.

Electrical connection
Ensure that the power voltage specified on the appliance rating plate is the same as the mains voltage. The rating plate is on the front edge of the oven (visible when the door is open).

- Replacement of power cables (type H05 RR-F 3 x 1.5 mm^2) must be carried out by a qualified electrician. Contact an authorised After-Sales Service.

The oven is programmed to operate with power absorption above 2.5 kW (indicated by "HIGH" in the settings, as shown in the figure below) which is compatible with a domestic power supply above 3 kW. If the household has a lower power supply, the setting must be lowered ("LOW" in the settings). The table below details the recommended electrical power settings for the various countries.

COUNTRY	ELECTRICAL POWER SETTING
GERMANY	HIGH
SPAIN	LOW
FINLAND	HIGH
FRANCE	HIGH
ITALY	LOW
NETHERLANDS	HIGH
NORWAY	HIGH
SWEDEN	HIGH
U.K.	LOW
BELGIUM	HIGH

1. To lower the power absorption setting, turn the "Functions" knob to "SETTINGS" and select.
2. Confirm with button ✓
3. Select "power" on the menu
4. Confirm with button ✓
5. Select "LOW"
6. Press button ✓; a message appears on the display confirming your selection.

GENERAL RECOMMENDATIONS

Before use:
- Remove any protective pieces of cardboard, protective film and adhesive labels from the oven and the accessories.
- Remove the accessories from the oven and heat it at 200°C for about an hour to eliminate the smell and fumes from the protective grease and insulating materials.

During use:
- Do not place heavy objects on the door as they could damage it.
- Do not cling to the door or hang anything from the handle.
- Do not cover the inside of the oven with aluminium foil.
- Do not pour water into the inside of a hot oven; this could damage the enamel coating.
- Do not drag pots or pans across the bottom of the oven as this could damage the enamel coating.
- Make sure that the electrical cables of other appliances do not touch hot parts of the oven or become trapped in the door.
- Do not expose the oven to atmospheric agents.

Installation

After use:
- Allow the Artisan accessory to cool down before removal if cleaning is required. When the Artisan accessory is removed from the oven, ensure that the cap supplied is used to prevent dirt entering the electrical socket.
Safeguarding the environment

Disposal of packing materials
- The packaging materials are 100% recyclable and are marked with the recycling symbol ♲ .
- The various parts of the packing must therefore be disposed of responsibly and in full compliance with local authority regulations governing waste disposal.

Appliance scrapping
- This appliance is marked in compliance with European Directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE).
- By ensuring correct disposal of the product, the user can help prevent potential negative consequences for the environment and human health.

- The symbol on the product or on the accompanying documentation indicates that it should not be treated as domestic waste but must be taken to an appropriate collection centre for the recycling of electrical and electronic equipment.

Energy saving tips
- Only preheat the oven if specified in the cooking table or your recipe.
- Use dark lacquered or enamelled baking moulds as they absorb heat far better.

ECO Design Declaration

- This appliance meets the Eco design requirements of European Regulation No. 65/2014 and No. 66/2014 and complies with the European Standard EN 60350-1.

Troubleshooting guide

The oven does not work:
- Check that the mains electricity supply is working and that the oven is connected to it.
- Switch the oven off and on again to see if the fault persists.

The electronic programmer does not work:
- If the display shows the letter "*F*" followed by a number, contact your nearest After-Sales Service. Specify in this case the number after the letter "*F*".

After-Sales Service

Before contacting the After-Sales Service:
1. See if you can solve the problem yourself with the help of the suggestions given in the "Troubleshooting guide".
2. Switch the appliance off and then on again it to see whether the problem has been eliminated.

If the fault persists after the above checks, contact the nearest After-Sales Service.

Always specify:
- a brief description of the fault;
- the type and exact model of the oven;
- the service number (number after the word "Service" on the rating plate), located on the right-hand edge of the cooking compartment (visible when the oven door is open). The service number is also indicated on the guarantee booklet;
- your full address;
- your telephone number.

S E R V I C E 0000 000 00000

If any repairs are required, contact an **authorised After-Sales Service** (to guarantee use of original spare parts and correct repair).

Cleaning

⚠ WARNING

- **Do not use steam cleaners.**
- **Do not clean the oven until it is cool to the touch.**
- **Disconnect the appliance from the mains power supply.**

Oven exterior
IMPORTANT: do not use corrosive or abrasive detergents. If any of these products comes into contact with the appliance, clean immediately with a damp cloth.
- Clean the surfaces with a damp cloth. If it is very dirty, add a few drops of washing up detergent to the water. Finish off with a dry cloth.

Oven interior
IMPORTANT: do not use abrasive sponges or metallic scrapers or scourers. Over time, these can ruin enamelled surfaces and the oven door glass.
- After every use, allow the oven to cool and then clean it, preferably while it is still warm in order to remove built-up dirt and stains caused by food residues (e.g. food with a high sugar content).
- Do not use corrosive or abrasive detergents.
- Clean the door glass with a suitable liquid detergent. The oven door can be removed to facilitate cleaning (see MAINTENANCE).
- Do not clean the Artisan cavity plug immediately before running an Artisan cooking cycle.
- **Observe the following recommendations when cleaning the round stainless steel cover of the fan and the Artisan plug plate (Twelix Disc):**
  - use a soft cloth (microfibre is best) dampened with water or glass detergent.
  - do not use absorbent kitchen paper, which can leave traces of paper and streaks on the disc.

Cleaning

N.B: during prolonged cooking of foods with a high water content (e.g. pizza, vegetables, etc.) condensation may form on the inside of the door and around the seal.
When the oven is cold, dry the inside of the door with a cloth or sponge.

Accessories:
- Soak the accessories in water with washing up detergent immediately after use, handling them with oven gloves if still hot.
- Food residues can be easily removed using a washing-up brush or sponge.
- See the "Cleaning" section for instructions on how to clean the Artisan accessory.

Artisan accessory cleaning:
- Internal electrical socket: remove the metallic plug cover; use a damp sponge to clean the plug. Do not use metallic and/or sharp tools.
- After every use, allow the steam grid to cool and then clean it, preferably while it is still warm, to remove stubborn dirt and stains caused by food residues (e.g. food with high sugar content).
  Dishwasher safe.
- Soak the drip tray in water with washing-up liquid added immediately after use, handling it with oven gloves if still hot. Food residues can be easily removed using the brush supplied by the After-Sales Service.

Note: after a certain number of uses at high temperatures, there is a naturally occurring colour change of the heating element, due to the formation of layers of ferrous oxide aggregates, which do not affect the functionality and safety of the component.

Descaling:
Pour in an additional 800 ml of cold white vinegar and top up to the "max" mark with water at room temperature. Leave for 6-8 hours, then rinse with water and remove any residue with a non-abrasive sponge.
Specific products for cleaning and descaling can be purchased separately from the After-Sales Service.

Maintenance

– **Use protective gloves.**
– **Ensure that the oven is cold before carrying out the following operations.**
– **Disconnect the appliance from the mains power supply.**

REMOVING THE DOOR

To remove the door:
1. Open the door fully.
2. Lift the catches and push them forwards as far as they will go (fig. 1).
3. Close the door as far as it will go (A), lift it up (B) and turn it (C) until it is released (D) (fig. 2).
(Fig. 1)

To refit the door:
1. Insert the hinges in their seats.
2. Open the door fully.
3. Lower the two catches.
4. Close the door.
(Fig. 2)

REMOVING THE SIDE GRILLES
The side accessory-holder grilles are equipped with two fixing screws (fig. 3) for optimum stability.
1. Remove the screws and corresponding plates on the right and left with the aid of a coin or tool (fig. 4).
2. To remove the grilles, lift them up (1) and turn them (2) as shown in fig. 5.
REPLACING THE LAMP
To replace the rear lamp (if present):
1. Disconnect the oven from the mains power supply.
2. Unscrew the lamp cover, replace the lamp (see note for lamp type) and screw the lamp cover back on.
3. Reconnect the oven to the power supply.
N.B:
– Use only 25-40 W/230 V type E-14, T300 °C incandescent lamps, or 20-40 W/230 V type G9, T300 °C halogen lamps.
– The lamp used in the appliance is specifically designed for electrical appliances, and is not suitable for household room illumination (Commission Regulation (EC) no. 244/2009).
– Lamps are available from our After-Sales Service.

IMPORTANT:
– **If using halogen lamps, do not handle with bare hands as fingerprints can damage them.**
– **Do not use the oven until the lamp cover has been repositioned.**

(Fig. 3)

(Fig. 4)
(Fig. 5)

Instructions for oven use

FOR ELECTRICAL CONNECTION, SEE THE PARAGRAPH ON INSTALLATION

The Artisan oven is equipped with an electrical socket on the rear wall of the oven to supply power to the heating element inside the Artisan accessory when plugged in.
1. Control panel
2. Upper heating element/grill
3. Cooling fan (not visible)
4. Rating plate (not to be removed)
5. Lamps
6. Circular heating element (not visible)
7. Fan
8. Rotisserie (if supplied)
9. Bottom heating element (not visible)
10. Door
11. Position of shelves (the number of shelves is indicated on the front of the oven)
12. Rear wall
13. Meat probe connection
14. Twelix disc
15. Modular plug connection
16. Cap (When the Artisan accessory is removed from the oven, ensure that the cap supplied is used to prevent dirt entering the electrical socket)
17. Glass lid
18. Perforated shelf
19. Drip tray + heating element
20. Drip tray rack

N.B:
– During cooking, the cooling fan may switch on at intervals in order to minimise energy consumption.
– At the end of cooking, after the oven has been switched off, the cooling fan may continue to run for a while.
– When the oven door is opened during cooking, the heating elements switch off.

Instructions for oven use

ACCESSORIES SUPPLIED

A. WIRE SHELF: the wire shelf can be used to grill food or as a support for pans, cake tins and other ovenproof cookware.
(Fig. A)

B. BAKING TRAY: for making bread and pastry products, but also roasts,
fish en papillotte, etc.
(Fig. B)

C. MEAT PROBE: for measuring the core temperature of food during cooking.
(Fig. C)

D. DRYING TRAY: the drying tray is designed for drying fruit, mushrooms or vegetables.
(Fig. D)

E. TURNSPIT: for uniform roasting of large pieces of meat and poultry.
(Fig. E)

F. SLIDING SHELVES: for easier handling of shelves and trays.
(Fig. F)

the oven
The number of accessories may vary according to which model is purchased.

ACCESSORIES NOT SUPPLIED
Other accessories can be purchased separately from the After-Sales Service.

Instructions for oven use

INSERTING WIRE SHELVES AND OTHER ACCESSORIES IN THE OVEN

1. Insert the wire shelf horizontally, with the raised part "A" facing upwards (Fig. 1).
2. The other accessories, such as the baking tray, are inserted in the same way as the wire shelf (fig. 2).
(Fig. 1)
(Fig. 2)

HOW TO ASSEMBLE AN ARTISAN STEAM ACCESSORY

Before every steam cooking cycle, check that the male pins are clean in order to guarantee the right connection.

Place the drip tray (1) on its support (2 – drip tray rack), ensuring that the plug is positioned on the opposite side of the handle.
Place the perforated shelf (3 – steam grid) on the drip tray (1)
Instructions for oven use

Artisan accessory must be inserted at the first shelf position to allow the electrical plug to engage.

N.B. sliding shelves cannot be installed on the first and second shelf positions because they will interfere with the Artisan accessory.
1. Use both hands to properly place the Artisan accessory on the first shelf position (fig. 1)
2. Use the handle to push the Artisan accessory up to the socket. (fig. 2)
3. Ensure that the plug is fully engaged by firmly pushing in the Artisan accessory (fig. 2)
4. A message confirming correct connection will be shown on the display (fig. 4A). When the accessory is unplugged, this will be shown on the display (fig. 4B).

Removing the accessory
IMPORTANT: The Artisan accessory can become extremely hot. Always use oven gloves to touch and move it.

Grasp the front handle and partially remove the accessory (fig. 2)
Then use lateral support to better grasp and fully remove the accessory, carefully avoiding impacts that could damage the electrical plug (fig. 3)

(Fig. 1)	(Fig. 2)	(Fig. 3)
Accessory inserted	Accessory removed
(fig. 4A)	(fig. 4B)

Instructions for using the oven

ARTISAN ACCESSORY

Food types/custom steam preparation
Use both hands to properly place the Artisan accessory on the first shelf position (fig. 1)
Ensure that the plug is fully engaged by firmly pushing in the Artisan accessory (fig. 2)
Fill with water (according to the recipe – fig. 5)
Insert the oven shelf on the second/third shelf position (depending on the food), place the casserole dish containing the food on the oven shelf (this is to avoid smoke caused by dripping grease – fig. 6)
Close the door and press ⊘

Important: do not place the food directly on the steam grid or on the oven grid; do not add water during steam cooking cycle; if the cycle starts without water, stop it and wait about 20-30 minutes with the oven door fully opened before adding the water.

Pure steam preparation
1. Use both hands to properly place the Artisan accessory on the first shelf position (fig. 1)
2. Ensure that the plug is fully engaged by firmly pushing in the Artisan accessory (fig. 2)
3. Fill with water (according to the recipe – fig. 5)
4. Place the food on the perforated shelf, ensuring that is correctly positioned inside the pan set tray (fig. 7)
5. Place the glass lid correctly on the drip tray, ensuring that the seals fit inside the drip tray itself (fig. 8)
6. Close the door and press ⊘

Important: do not add water during steam cooking cycle; if the cycle starts without water, stop it and wait about 20-30 minutes with oven door fully opened before adding the water
(Fig. 5)

Zone 5
To move between the different zones, use the "Browse" knob: the cursor moves to the adjustable values, following the order described above.

Press the ✓ button to select the value, change it by turning the "Browse" knob and confirm with the ✓ button.

FIRST USE – SELECTING A LANGUAGE AND SETTING THE TIME

For correct use of the oven, you will have to select the desired language and set the correct time when it is switched on for the first time.
Proceed as follows:

1. Turn the "Functions" knob to any position: the display will show the list of the first three available languages.
2. Turn the "Browse" knob to scroll through the list.
3. When the desired language is highlighted, press ✓ to select it. After language selection, the display will flash 12:00.
4. Set the time by turning the "Browse" knob.
5. Confirm your setting by pressing ✓ .

Instructions for using the oven

SELECTING COOKING FUNCTIONS

1. If the oven is off, turn the "Functions" knob; the display will show the cooking functions or associated submenus.
**N.B: for the list and description of functions, see the table on page 26.**
2. Within the sub-menus, browse the various options available by turning the "Browse" knob: the chosen function is highlighted in white in the centre of the screen. To select it, press ✓.
3. The cooking settings are shown on the display. If the pre-set values are those desired, turn the "Browse" knob to position the cursor at "Start" and then press ✓; otherwise, proceed as indicated above to change them.

SETTING THE TEMPERATURE/OUTPUT OF THE GRILL (STANDARD FUNCTIONS ONLY).

To change the temperature or output of the grill, proceed as follows:
1. Check that the cursor is positioned next to the temperature value (zone 1); press button ✓ to select the parameter to be changed: the temperature values flash.
2. Set the desired value by turning the "Browse" knob and press ✓ to confirm.
3. Turn the "Browse" knob to position the cursor at "Start" and then press ✓.
4. The display indicates which shelf food should be placed on. Do as instructed and press ✓ to start cooking. The set temperature can also be changed during cooking by following the same procedure.
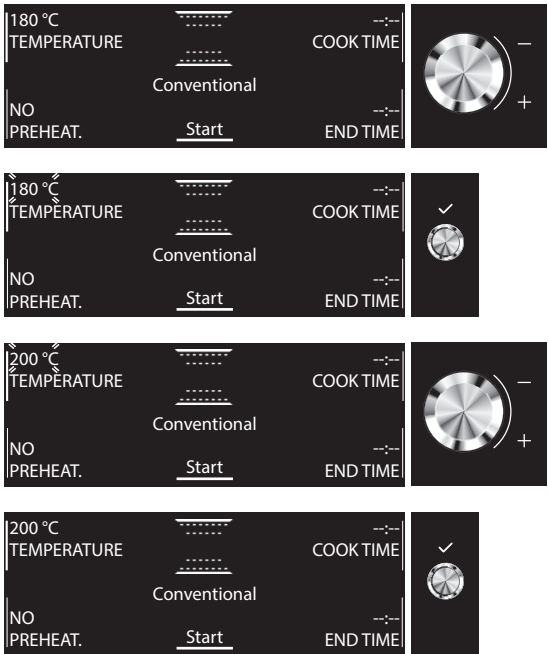

Instructions for using the oven

PREHEATING THE OVEN (STANDARD FUNCTIONS ONLY).

If you do not wish to preheat the oven (for those functions which allow), simply change the oven's default selection as follows:
1. Turn the "Browse" knob to position the cursor at preheating.
2. Press button ⊘ to select the setting: "Yes" flashes on the display.
3. Change the setting by turning the "Browse" knob: "No" appears on the display.
4. To confirm your choice, press button ⊘.
FAST PREHEATING (STANDARD FUNCTIONS ONLY).

If you wish to preheat the oven quickly before inserting food, proceed as follows:

1. Turn the Function knob to select "Specials", and confirm by pressing ⊘
2. Turn the "Browse" knob to select the fast preheating function.
3. Confirm by pressing ⊘: the settings are shown on the display.
4. If the proposed temperature is that desired, turn the "Browse" knob to position the cursor at "Start", and then press ⊘. To change the temperature, proceed as described in previous paragraphs. An acoustic signal will sound when the oven has reached the set temperature. At the end of preheating, the oven automatically selects the conventional function 📶. At this point food can be placed in the oven for cooking.
5. If you wish to set a different cooking function, turn the "Functions" knob and select the desired function.

Instructions for using the oven

SETTING COOKING TIME

This function can be used to cook food for a set length of time, from a minimum of 1 minute to the maximum time allowed by the selected function, after which the oven switches off automatically.

1. To select the function, turn the "Browse" knob to position the cursor at "cook time".
2. Press button ⊘ to select the setting; "00:00" flashes on the display.
3. Change the value by turning the "Browse" knob to display the desired cooking time.
4. Confirm the selected value by pressing button ⊘.

180 °C TEMPERATURE	Conventional	--:-- COOK TIME
NO PREHEAT.	Start	--:-- END TIME

180 °C TEMPERATURE	Conventional	-00:30 COOK TIME
NO PREHEAT.	Start	19:01 END TIME

180 °C TEMPERATURE	Conventional	00:01 COOK TIME
NO PREHEAT.	Start	19:01 END TIME

| 180 °C TEMPERATURE	Conventional	-00:30 COOK TIME
NO PREHEAT.	Start	19:20 END TIME

BROWNING (STANDARD FUNCTIONS ONLY).

At the end of cooking, with certain functions, the display indicates the possibility of browning the surface of the item. This function can only be used when cooking time has been set.

At the end of the cooking time, the display shows "+/- to prolong, ⊘ to brown".

Press button ⊘. The oven starts a 5-minute browning cycle. This function can only be used once after cooking.

Cooking finished at 20:00 +/- to prolong, ⊘ to brown.

|	-00:05 COOK TIME
Browning	20:05 END TIME

Browning finished at 20:05

Instructions for using the oven

SETTING END OF COOKING TIME/DELAYED START

The end cooking time can be set and the start of cooking delayed by up to 23 hours and 59 minutes. This can only be done once the cooking time has been set. **This setting is only possible when preheating is not required for the selected function.** After setting the cooking time, the display shows the end of the cooking time (for example 19:20).

To delay the end of the cooking time, and thus also the cooking start time, proceed as follows:

1. Turn the "Browse" knob to position the cursor at the end of cooking time.
2. Press button ⊘ to select the setting: the end of the cooking time flashes.
3. To delay the end of cooking time, turn the "Browse" knob to set the desired value.
4. Confirm the selected value by pressing button ⊘.
5. Turn the "Browse" knob to position the cursor at START and then press ⊘ .
6. The display indicates which shelf food should be placed on. Do as instructed and press ⊘ to start cooking. The oven will start cooking after a period of time calculated so as to finish cooking at the set time (for example, in the case of a dish which requires a cooking time of 20 minutes, if the end of the cooking time is set to 20.10, the oven will begin cooking at 19.50).
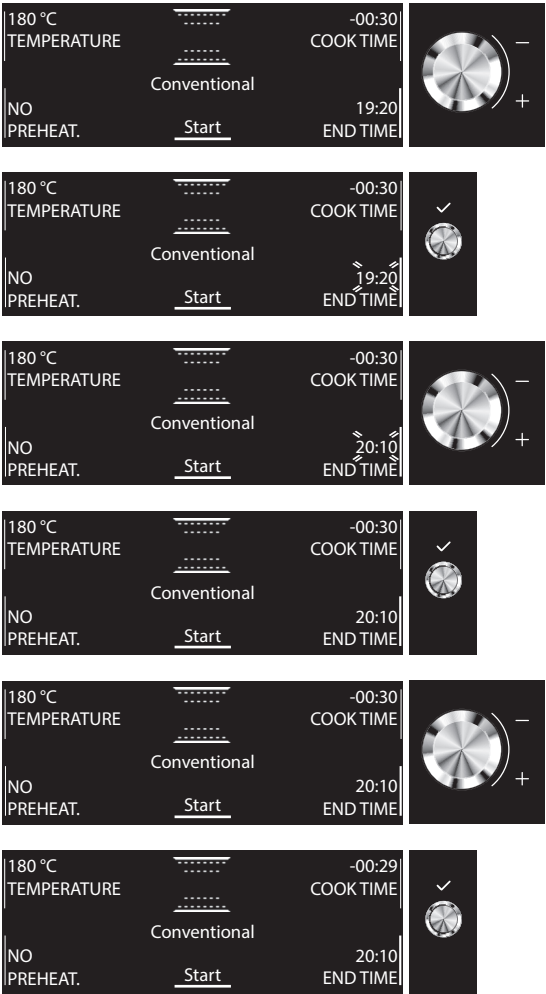

N.B: during the interval before cooking starts, the oven can in any case be switched on by turning the "Browse" knob to position the cursor at "Start" and then pressing button ⊘ .
At any time, set values (temperature, grill setting, cooking time) can be changed as described in previous paragraphs.

Instructions for using the oven

TIMER

This function can be used only with the oven switched off and is useful for monitoring the cooking time of pasta, for example. The maximum time which can be set is 1 hour 30 minutes.

1. With the oven off, press button ✓: the display will show "00:00:00".
2. Turn the "Browse" knob to select the desired time.
3. Press button ✓ to start the countdown. When the set time has elapsed, the display will show "00:00:00" and an acoustic signal will sound.
   At this point, the time can be prolonged, proceeding as described above, or the timer can be deactivated by pressing the ✓ button (the time of day will be shown on the display).

01 : 09 : 00 Timer	✓

PROFESSIONAL FUNCTIONS

Thanks to the professional functions, you can choose from 17 recipes. The oven offers a suitable function for every type of recipe category and also advises the ideal temperature and shelf for cooking the dish. For advice on use of these functions, refer to the Recipe Book, which contains a number of recipe ideas that you can personalise to suit your own taste. The available functions are given below. The time and temperature for each recipe are indicated on the oven display and/or in the Recipe Book.

# Instructions for using the oven

ARTISAN STEAM FUNCTIONS

To start an Artisan function, navigate through the main menu (refer to **Selecting cooking functions**).
To run the Artisan functions, the Artisan accessory must be properly inserted into the oven.
If an Artisan cooking cycle is required but the Accessory is not inserted, the appliance will detect its absence and will advise that it needs to be inserted before proceeding:

Plug in the accessory

Artisan steam function	

Automatic TEMPERATURE		--:-- COOK TIME
	Pure steam	
	Start	--:-- END TIME

Food types
Thanks to the steam-assisted function, you can choose from four different food categories.
The oven offers a suitable function for every type of food category, and also setting the ideal temperature for cooking the food. For suggestions as to how to use these pre-set functions, refer to the cooking table and the recipe book.

Instructions for using the oven

MEAT PROBE
The meat probe supplied allows you to measure the exact core temperature of food during cooking, between 0 ° and 100 °C, in order to ensure that food is cooked to perfection. Based on the food being cooked, the required core temperature can be set. It is very important to position the probe accurately in order to obtain perfect cooking results. Insert the probe fully into the fleshiest part of the meat, avoiding bones and fatty areas (fig. A). For poultry, the probe should be inserted sideways into the middle of the breast, taking care to ensure that the tip does not end up in a hollow area (fig. B). In the case of meat with very irregular thickness, check that it is cooked properly before removing it from the oven. Connect the end of the probe with the hole located on the right wall of the oven chamber.
The probe can be used with the following functions:
- Conventional
- Convection bake
- Pro steam meat
- Pro steam poultry
- Pro steam custom
- Forced air
- Turbogrill
- Tweli-grill (where present)
- Slow Cooking Meat and Slow Cooking Fish

If the probe is not inserted, cooking will proceed in the normal way (fig. 1); otherwise the display will indicate that the probe is not connected (fig. 2). After the confirmation message, the display shows all the cooking parameters selected:
– at the top left (zone 1) the oven temperature;
– at the top right (zone 3) the desired core temperature of the food (meat probe, as indicated in Fig. 3).

To start cooking, turn the "Browse" knob to position the cursor at "Start" and then press ⊘ .
The bottom right (zone 4) of the cooking screen shows the "current" core temperature of food (fig. 4). In the first two minutes, the desired temperature of food (meat probe, as indicated in fig. 4) can be changed. After two minutes, this indication is replaced by the cooking time (fig. 5). When the desired core temperature for the particular food is reached, a message to that effect appears on the display for 3 seconds (fig. 6). Subsequently, the oven offers the option of prolonging cooking time by turning the "Browse" knob towards +. If no button is pressed, the oven continues cooking for 6 minutes in order to ensure excellent results. If cooking time is prolonged, this is displayed at the top right (zone 3). At the end of cooking, the display indicates the possibility of "browning" (for those functions which allow it).
NOTES:
1. When two minutes have elapsed since the start of cooking, to change the desired core temperature of food, the meat probe must be disconnected and then reconnected again.
2. If the meat probe is inserted before a function has been selected, only cooking functions without preheating will be selectable. For recipes which require preheating, insert the food with the meat probe only after preheating.

SETTINGS

1. To change certain display settings, select "SETTINGS" from the main menu by turning the "Functions" knob.
2. Confirm by pressing ✓: the display shows which settings can be changed (language, volume of acoustic signal, display brightness, time, energy saving function, power).
3. Change the setting by turning the "Browse" knob.
4. Press button ✓ to confirm.
5. Follow the instructions of the display to change the settings.
6. Press button ✓; a message appears on the display confirming your selection.

N.B: When the oven is switched off, if the ECOMODE ("Energy saving") function is selected (ON), the display switches off after a few minutes, showing the clock. To view information on the display and switch the light on again, just press any of the buttons or turn one of the knobs. If the ECOMODE is activated during a cooking function, the cavity lamp will be switched off after 1 minute of cooking and reactivated for each user interaction. If, on the other hand, the function is not selected (OFF), after a few minutes the display is merely dimmed.

KEY-LOCK

This function can be used to lock the control panel buttons.
To activate it, press ⟪ and ✓ at the same time for at least 3 seconds.

If activated, the functions of the buttons are locked and the display shows a message and the symbol 🔒. This function can also be activated during cooking.
To deactivate it, repeat the above procedure. When the key-lock function is activated, the oven can only be switched off by turning the knob to 0 (zero). In this case, however, the previously selected function will have to be set again.

Functions description table

TRADITIONAL FUNCTIONS		
	CONVENTIONAL	For cooking any kind of dish on one shelf only. Use the 3rd shelf. To make pizza, savoury pies and sweets with liquid fillings, use the 1st or 2nd shelf.
	GRILL	For grilling steak, kebabs and sausages; for cooking vegetables au gratin and toasting bread. Place food on the 4th or 5th shelf. When grilling meat, use the drip tray to collect the cooking juices. Position it on the 3rd/4th shelf, adding approx. half a litre of water. The oven does not have to be preheated. During cooking, the oven door must remain closed.
	TURBOGRILL	For roasting large joints of meat (legs, roast beef, chicken). Position the food on the middle shelves. Use the drip tray to collect the cooking juices. Position it on the 1st/2nd shelf, adding approx. half a litre of water. The oven does not have to be preheated. During cooking, the oven door must remain closed. With this function, you can also use the rotisserie (if provided).
	TWELI-GRILL	For grilling meat, fish and vegetables on one or two shelves at the same time. Place the grill with the food to be grilled on the 5th, 4th or 3rd shelf (choose the best distance, considering the size of the food and the desired level of browning, bearing in mind that the closer the food is to the grill, the more it will brown). To grill a large amount of food, place the two wire shelves on levels 5 and 3. Once the food on the upper shelf is browned to your satisfaction, swap the position of the two shelves and finish cooking. In this way, the food on both shelves can be served at the same time, with the same temperature and level of browning. Use the drip tray to collect the cooking juices. Position it on the 1st/2nd shelf, adding approx. half a litre of water. The oven does not have to be preheated.
	FORCED AIR	To cook a variety of food requiring the same cooking temperature on several shelves (maximum three) at the same time (e.g: fish, vegetables, cakes). This function can be used to cook different foods without odours being transferred from one food to another. Use the 3rd shelf to cook on one shelf only, the 1st and 4th to cook on two shelves, and the 1st, 3rd and 5th to cook on three shelves.
	CONVECTION BAKE	For cooking meat, filled pies (cheesecake, strudel, fruit pies) and stuffed vegetables on one shelf only. This function uses intermittent and gentle ventilation, which prevents excessive drying of foods. It is advisable to use the 3rd level. The oven does not have to be preheated before cooking.
	SPECIALS	see SPECIAL FUNCTIONS
	SETTINGS	Setting the display (language, time, brightness, volume of acoustic signal, energy saving function).
	PROFESSIONAL FUNCTIONS – Baking pastry	Specific functions for the type of dish chosen, with the ideal temperature recommended. The oven chamber is automatically prepared with optimum preheating, and cooking is managed automatically with a dedicated cycle for each recipe.
	ARTISAN STEAM COOKING FUNCTIONS	see ARTISAN STEAM COOKING FUNCTIONS.
	ARTISAN FUNCTIONS	This function is ideal for preparing different foods using the accessory provided. Follow the instructions. It is possible to select the desired power level from the three available (high, medium, low), and the cooking time. This program activates the accessory function in combination with the conventional heating elements.
	FAST PREHEATING	To preheat the oven rapidly.

Functions description table

SPECIAL FUNCTIONS		
Function	**Function**	**Description of function**
	DEFROST	To speed up defrosting of food. Place food on the middle shelf. Leave food in its packaging in order to prevent it from drying out on the outside.
	KEEP WARM	For keeping just-cooked food (e.g. meat, fried food, flans) hot and crisp. Place food on the middle shelf. This function will not activate if the temperature in the oven is above 65 °C.
	RISING	For optimal rising of sweet or savoury dough. Place the dough on the 2nd shelf. The oven does not have to be preheated. To safeguard the quality of proving, do not activate the function if the oven is still hot after a cooking cycle.
	SLOW COOKING MEAT SLOW COOKING FISH	For gently cooking meat (at 90 °C) and fish (at 85 °C). This function offers slow cooking which ensures the food remains tender and succulent. Thanks to the low temperature, the food does not brown on the outside and the end result is similar to steam cooking. Sear roasting joints in a pan first to brown the meat and help seal in its natural juices. Cooking times range from 2 hours for fish weighing 300 g to 4-5 hours for fish weighing 3 kg; for meat, times range from 4 hours for 1 kg joints to 6-7 hours for 3 kg joints. For best results, do not open the oven door during cooking, as this will allow heat to escape; use the meat probe (if provided) or a standard oven thermometer.
	DRYING **Fruit** **Vegetables** **Mushrooms**	For drying fruit, vegetables and mushrooms. Use the accessory provided (or a narrow mesh grid) to prevent slices from dropping due to their reduced size and to allow air to circulate. Use the 3rd level to cook on a single shelf, the 1st and 4th to cook on two shelves, the 1st, 3rd and 5th to cook on three shelves and the 1st, 3rd, 4th and 5th to cook on four shelves. The oven does not need to be preheated. Leave the oven door half open.
	YOGHURT	For preparing homemade yoghurt. Use small china jars or aluminium foil baking cups. Cover with aluminium foil before placing in the appliance. Place the baking tray with the containers on the 1st shelf. The oven does not have to be preheated.
	TWELI-BASE	For recipes that require heat from below. This function is recommended for finishing or enhancing browning the underside of all sorts of items (savoury pies, pizzas, bread, sweet cakes, biscuits, etc.) or for thickening foods with a very liquid consistency (such as sauces). The function can also be used for actual cooking. It is recommended for cooking foods which do not need to be browned on top, e.g. rice dishes, en cocotte dishes, stews and sauces. Use of the second shelf is recommended. The oven does not have to be preheated.
	ECO FORCED AIR	To cook stuffed roasts and pieces of meat on one shelf. This function uses discontinuous, delicate fan assistance, which prevents excessive drying of foods. In this ECO function, the light remains off during cooking and can be temporarily switched on by pressing the confirm button. To use the ECO cycle thus reducing energy consumption, the oven door should not be opened until the cooking recipe is completed. It is advisable to use the 3rd level. The oven does not have to be preheated.

Functions description table

ARTISAN STEAM COOKING FUNCTIONS		
Function	**Function**	**Description of function**
	FOOD TYPE Meat, poultry, fish, stuffed vegetables	The combined functions allow professional results to be obtained thanks to the addition of steam in the cooking cycles. Put the water in the accessory provided and select the specific function for your dish. The amounts of water and the optimum temperatures for each type of food are given in the cooking table.
	CUSTOM STEAM	This function combines steam cooking with traditional cooking, to cook your food in an optimum way. It is possible to manually select the oven temperature (from 130 °C to 200 °C) and the steam level (low, medium and high). The amount of water to be put in the steam accessory varies according to the steam level selected: low 100-150 ml, medium 150-250 ml and high 250-350 ml. The cooking table contains a few tips for preparing your items, including bread.
	PURE STEAM	Using the steam accessory provided with the special lid (see the relevant section) it is possible to cook fish, vegetables, creams, and other dishes with pure steam. The amount of water to be added for this function is always 1 litre.
	ARTISAN	This function is ideal for preparing different foods using the accessory provided. Follow the instructions. It is possible to select the desired power level from the three available (high, medium, low), and the cooking time. This program activates the accessory function in combination with the conventional heating elements.

Table of tested recipes

The cooking table indicates the ideal function and cooking temperature to ensure the best results with all recipes. If you wish to cook on one shelf only using the convection bake function, place food on the third shelf and select the temperature recommended for the "FORCED AIR" function when cooking on more than one shelf.

The indications given in the table are intended without the use of the sliding runners. Conduct tests without the sliding runners.

* When not provided, accessories can be purchased from the After-Sales Service.
** When grilling food, leave a space of 3-4 cm at the front to facilitate removal from the oven

Energy efficiency class (in accordance with EN 60350-1:2013-07)
Use the relevant table to conduct tests

Energy consumption and preheating time
Select the function and carry out the test with only the "Preheating" option activated. ("Preheating yes")

Recommended use and tips

How to read the cooking table:
The table indicates the best function to use for any given food, to be cooked on one or more shelves at the same time. Cooking times start from the moment food is placed in the oven, excluding preheating (where required). Cooking temperatures and times are approximate and depend on the amount of food and the type of accessory used. Use the lowest recommended values to begin with and, if the food is not cooked enough, then move on to higher values. Use the accessories supplied and preferably dark-coloured metal cake tins and oven trays. You can also use Pyrex or stoneware pans and accessories, but bear in mind that cooking times will be slightly longer. To obtain best results, carefully follow the advice given in the cooking table for the choice of accessories (supplied) to be placed on the various shelves.

Cooking different foods at the same time
Using the "FORCED AIR" function, you can cook different foods which require the same cooking temperature at the same time (e.g.: fish and vegetables), using different shelves. Remove the food which requires less cooking time and leave food which requires longer cooking time in the oven.

Desserts
– Cook delicate desserts with the conventional function on one shelf only. Use dark-coloured metal cake tins and always position them on the wire shelf supplied. To cook on more than one shelf, select the forced air function and stagger the position of the cake tins on the shelves, aiding optimum circulation of the hot air.
– To check whether a cake is cooked, insert a wooden toothpick into the centre of the cake. If the toothpick comes out clean, the cake is ready.
– If using non-stick cake tins, do not butter the edges as the cake may not rise evenly around the edges.
– If the cake "sinks" during cooking, set a lower temperature the next time, perhaps reducing the amount of liquid in the mixture and mixing more gently.
– For sweets with moist fillings (cheesecake or fruit pies) use the "CONVECTION BAKE" function. If the base of the cake is soggy, lower the shelf and sprinkle the bottom of the cake with breadcrumbs or biscuit crumbs before adding the filling.

Recommended use and tips

Meat
– Use any kind of oven tray or Pyrex dish suited to the size of the piece of meat being cooked. For roast joints, it is best to add some stock to the bottom of the dish, basting the meat during cooking for added flavour.
  Take great care, as this procedure generates very hot steam. When the roast is ready, let it rest in the oven for another 10-15 minutes, or wrap it in aluminium foil.
– When you want to grill meat, choose cuts with an even thickness all over in order to achieve uniform cooking results. Very thick pieces of meat require longer cooking times. To prevent the meat from burning on the outside, lower the position of the wire shelf, keeping the food farther away from the grill. Turn the meat two thirds of the way through cooking, taking care to avoid the steam when opening the oven door.
  To collect the cooking juices, it is advisable to place a drip-tray with half a litre of water directly under the grill on which the food is placed. Top-up when necessary.

Tips for dishes cooked using the traditional functions

Recipe	Shelf (from bottom)	Temperature (°C)	Recommended end temperature for meat probe (°C)
Roast beef, rare	2/3	200 – 220	48
Roast beef, medium	2/3	170 -190	60
Roast beef, well done	2/3	170 -190	68
Roast turkey	1/2	150 – 170	75
Roast chicken	2/3	200 – 210	83
Roast pork	2/3	170 -190	75
Roast veal	2/3	160 – 180	68

Rotisserie (only in certain models)
Use this accessory to roast large pieces of meat and poultry. Fit the cradle on the second shelf level. Place the meat on the rotisserie rod, tying it with kitchen string in the case of poultry, then secure both ends of the meat with the two specially designed forks, ensuring that the meat is held securely on the rod. Insert the rod in the aperture on the front wall of the oven and rest it on the support. To prevent smoke and collect cooking juices, it is advisable to place the drip-tray with at least half a litre of water on the first shelf. The rod has a plastic handle which must be removed before starting cooking, and which can be used at the end of cooking to avoid burns when taking the food out of the oven.

Pizza
Lightly grease the trays to ensure the pizza has a crispy base. Scatter the mozzarella over the pizza two thirds of the way through cooking.

Rising function (present only in specific models)
It is always best to cover the dough with a damp cloth before placing it in the oven. This function reduces the rising time of dough by approximately one third compared to proving it at room temperature (20-25 °C). The rising time for a 1 kg batch of pizza dough is around one hour.

Artisan steam functions
It is advisable to always start the cooking of breaded items (e.g. fish fillets) with the oven cold.
